# Foreword

## Sweden Makes in India!

Ties between Sweden and India continue to grow stronger. We see intensified relations in a range of areas of mutual benefit and an increasing exchange of high-level visits in both directions. The Make in India Week in Mumbai in 2016 saw the creation of a permanent platform for business leaders, the India Sweden Business Leaders' Round Table.

Swedish companies have been Making in India for many decades and today create 185 000 jobs in direct employment and around 1.3 million indirectly. We see companies contributing to India's development in a number of areas, focusing i.e. on energy/

environment and smart cities, ICT and digitalization, as well as healthcare and life sciences. Sweden believes in knowledge-based societies, powered by innovation and sustainability, while investing in people. In this, India and Sweden are ideal partners in building sustainable business for the future.

In this eighth edition of the Sweden – India Business Guide, we highlight the core values and key competencies that Sweden offers India in a strategic partnership. We hope that this guide can be part of your toolbox for increasing and deepening business relations between India and Sweden.

Harald Sandberg  
Ambassador  
of Sweden to India

Ulrika Sundberg

TEAM SWEDEN

EMBASSY OF SWEDEN

## Embassy of Sweden

The Embassy of Sweden in New Delhi represents the Swedish Government in India and is responsible for strengthening contacts between Sweden and India within a range of areas in both the public and private sector. It undertakes a wide variety of activities which aim to promote political, economic and cultural ties between Sweden and India. The Embassy promotes trade and economic cooperation with particular focus on business promotion. The Embassy is also responsible for spreading information about Sweden in India. It provides support to Swedish citizens in consular matters and issues visas and permits for Indian and third country national citizens. The Ambassador in New Delhi is also accredited to Sri Lanka, Nepal, Bhutan and Maldives.

CONSULATE GENERAL  
OF SWEDEN

## Consulate General of Sweden

Established in September 2012, the jurisdiction of the Swedish Consulate General covers Maharashtra, Gujarat and Goa – an area comprising 173 million people. The Consulate's major role in India is to develop bilateral trade relations and grow finer insights into the Indian system through different institutions and representatives from varied industries and the regional governments. Its prime aim is to broaden and deepen this coalition with special emphasis on trade and investments. It also focuses on spreading information on Swedish inventions, innovations, technologies and services and how they can benefit India. The Consulate General aims at increasing knowledge about Sweden in India and furthers cultural exchange. It works closely with the Embassy of Sweden in Delhi, Business Sweden and the Swedish Chamber of Commerce under the umbrella of Team Sweden to help liaise and increase business contacts between Swedish and Indian companies within strategic sectors, such as Smart cities, Climate change, Energy & Environmental Technology, Health Care & Life Science and ICT.

## Business Sweden – The Swedish Trade & Invest Council

Business Sweden's purpose is to help every Swedish company to reach their full international potential and companies abroad to reach their full potential by investing in Sweden. We offer our customers strategic advice and hands-on support. Business Sweden is owned by the Swedish Government and the Swedish Industry. The shared ownership provides access to contacts and networks at all levels. Business Sweden was founded on the first of January, 2013, by a merger of the Swedish Trade Council (Exportrådet) and Invest Sweden. Business Sweden was established in India in 1996. We are now a team of 30 business consultants, with offices located in New Delhi and Bangalore. Business Sweden has for the past twenty years played an active role in enhancing trade and investments between Sweden and India, which is especially strong in areas such as Smart Cities, Telecom, Power, Smart Manufacturing, Medtech, but also with an increased focus on consumer markets. Business Sweden acts as a dedicated business partner for Swedish companies in India by assessing the market, building strategies for market entry, growth and development as well as supporting in establishing business entities and teams.

## The Swedish Chamber of Commerce India

The Swedish Chamber of Commerce India is an organization for and by the Swedish companies in India. In close collaboration with companies we work on strategic questions to further the value proposition of Sweden and build meaningful, sustainable and successful businesses in India.

We provide catalytic platforms for collaborations, knowledge development, and sharing of experiences and best practices. The Chamber also gathers the collective voice of the Swedish business community on ease of doing business and the experience of India as a business destination. With Swedish companies present in the country for more than 100 years, the experience runs deep. Together we continue to tell the story of "Sweden Makes Business in India".

# Clean air enables sustainable production

Do you want to boost profitability by making your operations as efficient as possible? Do you also need to meet high environmental standards and keep your employees safe from fumes and dust? At Nederman, we can help you on all counts. With 70 years of leading expertise from a wide variety of industries, we know what it takes to make your business clean, safe and compliant.

Nederman offers the widest range of products and clean air solutions for extraction and filtration of dust and particles, welding fumes, exhaust fumes, oil mist, gases, and combustible dust. We are present in many industries, such as welding, metalworking, composite machining, woodworking, vehicle services, process industry and energy. Covering the entire country, we are always close to help you maximize production efficiency, improve work environments and reduce environmental impact. We also fully support the Prime Minister's initiative Make

in India. That is why we have chosen to work with local sourcing, as it both boosts the local industry and benefits the environment. Both of these issues are part of our ongoing global sustainability efforts.

# NEFAB

## 1. Society

NEFAB strives to reduce carbon foot print of its customers by optimizing the packaging Solution through usage of optimum packaging material and optimization of packaging for different modes of transport. Thereby reducing the environmental impact & contributing to society for better tomorrow.

## 2. Creativity

With engineered complete packaging solutions and multi material engineering capability, NEFAB provides creative products to the customers. This ability of NEFAB is not only helpful to provide Environmentally Friendly packaging solutions, but also provides adequate protection to products being packed.

## 3. Innovation

With multi-material engineering & testing capability, NEFAB has designed an innovative product using a combination of paper & plywood, utilizing their inherent strength, to replace wooden boxes, thereby reducing environmental impact.

## 4. Our Sustainability Concept

NEFAB wants to secure a place in a sustainable future society.

To do that, we are actively working in our operations to achieve sustainable development and manage our stakeholders' requirements and expectations.

Sustainability work is an important and integrated part of NEFAB's customer offering. A structured process leads to a favourable business climate that attracts skills, provides more efficient control and strengthens the brand.

Sustainability work also play a key role in NEFAB's competitiveness, paving the way for doing business with new customers who share the same values.

The sustainability work is governed by NEFAB's vision, core values and code of conduct as well as the policies established in relation to laws and regulations.

Our sustainability strategy is organized in three main areas: Supply Chain - Own backyard - Value proposition

**Supply Chain:** NEFAB will ensure sustainability throughout its Supply Chain

**Own Back Yard:** Sustainability shall be more clearly instilled into NEFAB's own operations and internal processes

**Value Proposition:** Sustainability will be an integrated part of NEFAB's customer offering

Our sustainability concept means:

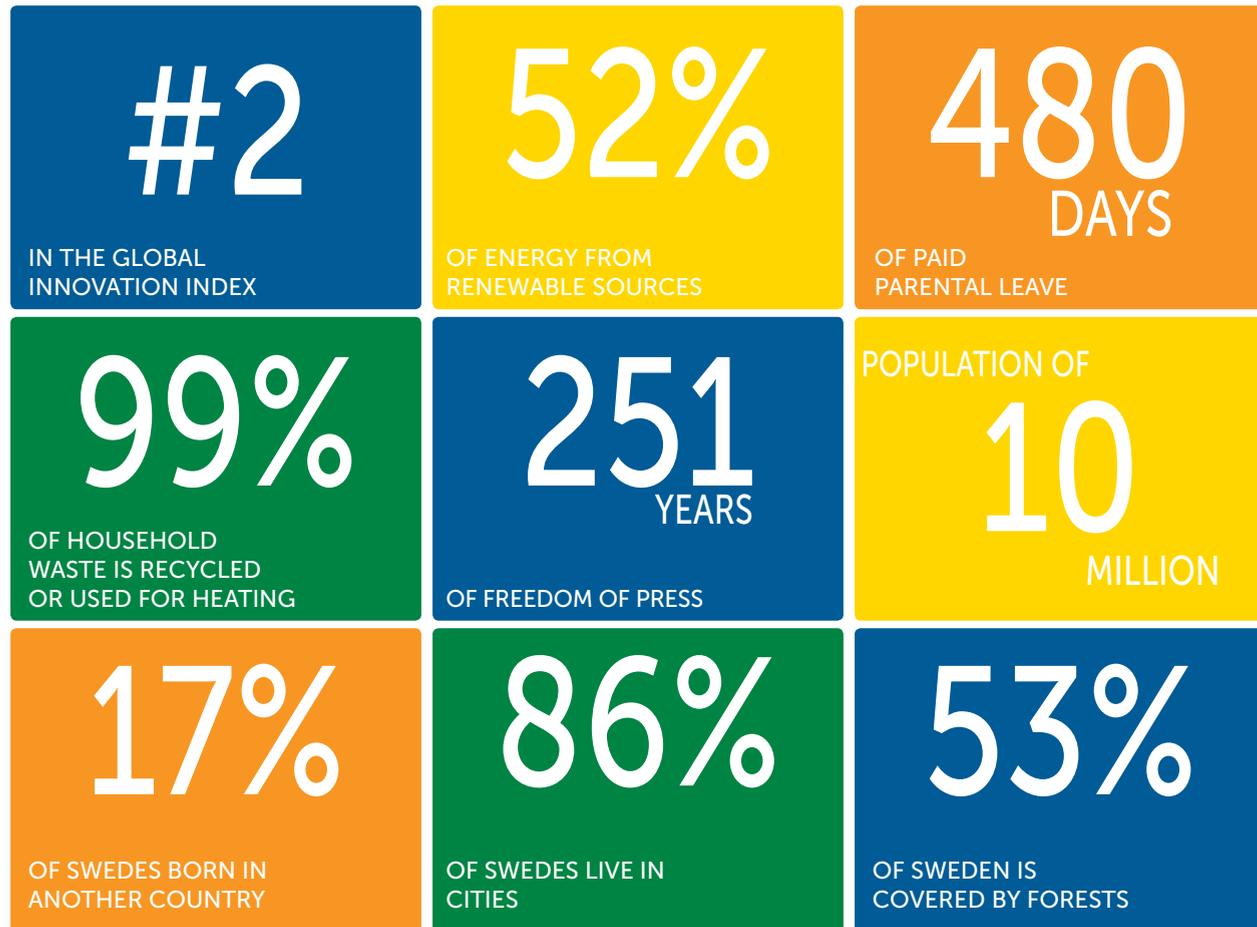

- Careful use of resources
- Respect for future generations and stakeholders
- What we do today will impact tomorrow
- It is future oriented but close in time

# Swedish-Indian Business History

Diplomatic relations between Sweden and India were established in 1948, the year after India became independent. However, business relations between the two nations date back further than that. The Swedish-Indian history can be viewed in three separate waves of development. The first wave of Swedish companies entered India in the beginning of the 20th Century, with pioneering companies like Ericsson, SKF, Swedish Match and ASEA (later to become ABB).

The second wave came after independence. In 1957, the Indian Prime Minister, Jawaharlal Nehru, visited his Swedish counterpart, Tage Erlander, and the two political leaders agreed that Sweden and India had a lot in common and would profit from collaboration. A large area of land was allocated

to Swedish companies in the city of Pune, which was a strategically good location considering the proximity to India's commercial centre in Mumbai. In the 1960-70s Pune became an important industrial hub, where Swedish companies like Alfa Laval, Tetra Pak, Sandvik and Atlas Copco were established.

The third wave of Swedish companies entered India during the 1980s and 1990s with among others Volvo Trucks & Buses and Perstorp. Companies with large purchasing organizations, such as IKEA and H&M, also started doing business in India. In the 2000s Volvo Cars and Scania established subsidiaries and were accompanied by an influx of small and medium sized companies, such as Systemair and Roxtec, to name a few.

establishing and investing in Sweden more recently, since the start of this millennium. The first foray was led by large IT companies with the top tier companies such as TCS, Wipro, Infosys and L&T Infotech. A second and more decisive wave of IT companies commenced a decade later led by Mahindra-Satyam, and the acquisition by HCL Technologies of Volvo IT and its 900 employees. Indian investments in Sweden in other areas are evident in industrial sectors such as Bioeconomy with Aditya Birla Group's acquisition of Domsjö Fabriker in viscose fibre, and Bharat Forge in Kilsta in automotive.

Trade between the two countries has grown over the last decade and a steadily rising number of Swedish companies have established themselves in India. At present, we can see an embryo of a potential fourth wave of Swedish-Indian business development. Swedish companies are now not only sourcing from India, but also progressively establishing their global hubs here with R&D, sales and manufacturing etc. Moreover, there is an influx of fast-moving consumer companies finding their space in a developing Indian retail market.

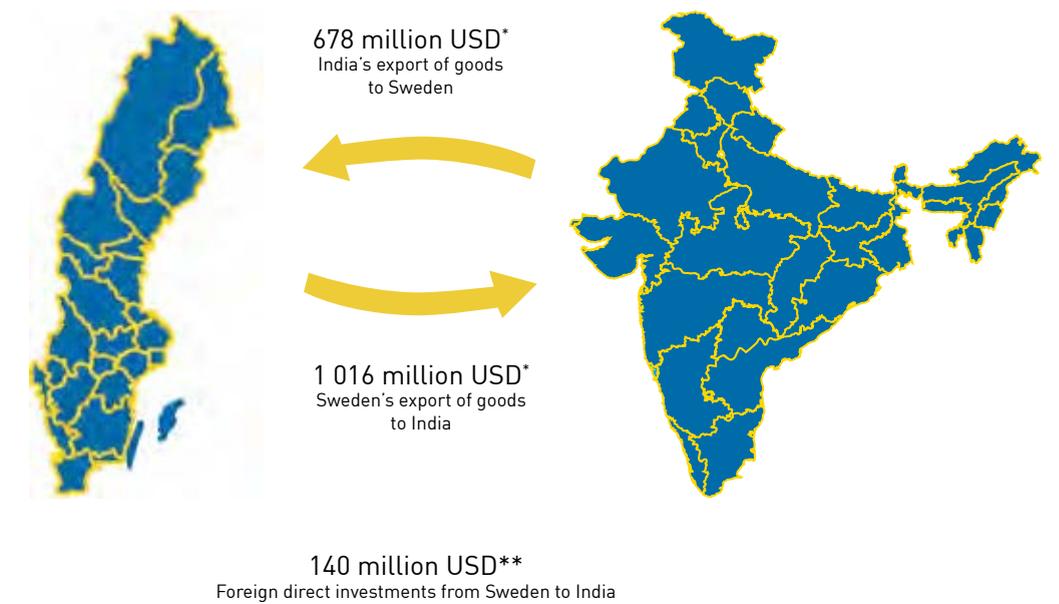

Whilst Swedish companies have a 100 year long history in India, Indian companies have been

Indian companies are in search of innovation, discovery and applications research and as such there have been investments and collaborations in Pharma and Materials Technologies. Cadila Pharma, Kemwell and ITC Group are some of the companies in these fields. An estimated 50 Indian companies in Sweden are employing a total of over 2000 people, and the number of employees engaged in Swedish businesses by Indian owned companies is 2-3 times higher. With the increasing global ambitions of Indian companies we can expect further investment and activity, as Sweden offers complimentary opportunities to Indian company ambitions.

**Scania Commercial Vehicles, India**

Scania is a world leading manufacturer of premium commercial vehicles, heavy trucks, buses and coaches as well as industrial and marine engines. Scania has been active in the Indian mining and construction segments since 2007. It has two manufacturing facilities in Narsapura, India, set up with an investment of Rs. 300 crore and a current production capacity of 2,500 trucks and 1000 buses. Scania India works in close alignment with national objectives and government programs such as Make in India, Skill India and Smart Cities. Manufacturing in India, skilling drivers through training programs and helping the country move to sustainable

transport are key operational focus areas. All Scania vehicles can run on alternative fuels. In October 2016, it inked a deal for 55 ethanol powered Green Buses to Nagpur Municipal Corporation and the flag off for the first 5 buses was in December 2016. It also launched 25 buses retrofitted with bio diesel engines with the Karnataka State Road Transport Corporation. Led by its philosophy of 'local waste to local fuel for local transport', Scania has initiated a pilot to showcase how sustainable fuel can be produced from sewage water in India. Social, environmental and economic sustainability is at the core of Scania's offerings.

Committed to delivering global expertise and comprehensive security solutions to suit your requirements, Securitas India is your trusted partner for protective services. A part of Securitas AB, global knowledge leader in safety and security, with revenues of over \$12bn, employing over 3,30,000 culturally diverse professionals in over 53 countries, Securitas in India is effectively minimizing risk for clients and securing people and assets across verticals. With our deep commitment on being responsive to clients and being the number one employer of choice within our industry, we strive persistently to remain the market leader

in client satisfaction and retention. We promise to deliver superior on ground operations by operating at the grass-root level through our cluster approach backed by technology enabled tools helping deliver efficient and predictive security. Our 24x7 National Command Centre, national network of well-trained security professional and state-of-the-art control rooms supported by quick response teams, bring in efficiency and predictability in security operations. We recognise our responsibilities that extend beyond business and believe in creating value and promising safer environments in everyday life.

Melker Dahlstrand/imagebank.sweden.se

## CORE VALUES

# Society

Sweden is consistently ranked as one of the most competitive economies in the world by the World Economic Forum and is open to international trade and investments. It is known for its rich natural resources, innovations, high-tech companies and caring society.

Modern Sweden is solidly founded on democracy and openness. Democratic principles shape not only the way the country is governed, but all levels in society – from preschool to the workplace. We also fly the flag for equality and transparency. The aim is to ensure that everyone enjoys the same opportunities, rights and obligations in all areas of life and hold the freedom to scrutinize how politicians and public agencies exercise their power.

Sweden's economic and social system, often referred to as the "Swedish Model", has lifted the country to one of the highest standards of living in the world. By combining a market economy with a strong public sector, a strong emphasis on freedom of expression and gender equality and an efficient welfare and social security system, Sweden ensures equality and financial security for each and every individual. Tax-financed education and health care contribute to making Sweden a role model for many other countries.

Swedish companies as well as Team Sweden tend to also "walk the talk" and apply these values at all levels. Corporate social responsibility means also applying core values to our business models as well as in our communication.

Ann Sofi Rosenkvist/imagebank.sweden.se

# Creativity

Sweden is a strong player in cultural and creative industries. Today, Sweden is one of the biggest streamers and exporters of music in the world, and has firmly established itself as one of the world's epicenters for developing and producing innovative, original, mass-market computer games. Sweden is also successful in fashion and design – with an increased focus on sustainability and circular economy – as well as literature, art and film.

These industries play an increasingly important role in the growth of the Swedish economy and are driving forces for innovation in other sectors of society and industry as well. Creative industries are encouraged to grow in an open society, where people have the space to experiment and express themselves freely. Swedish citizens are encouraged to take the chance to start a new business, which is

one of the key factors to the development of many successful Swedish companies.

The reasons behind the boom in Swedish cultural and creative industries are hard to pinpoint. Perhaps people have become more courageous in their expression, perhaps it is the effects of being a melting pot for different cultures or are people increasingly looking abroad for inspiration? Whatever the reason, Sweden is fast in adopting new trends and things have changed from the days of Bergman, Roxette and ABBA. Due to intense exchange between India and Sweden, India is increasingly becoming a source of influence and inspiration for Swedish artists and vice versa. This exchange of ideas is strengthening both sides in their quest for excellence.

# Innovation

A strong culture of innovation has propelled Sweden to the forefront of technological development. With a high number of patents per capita, Sweden is in the world's top 20, and Swedish creative thinking has resulted in some life-changing innovations spread around the world. The cardiac pacemaker has been implanted in more than 3.5 million people. The three-point auto seat belt is claimed to save a life every six minutes, and has been doing so for more than 50 years.

Both are Swedish inventions and part of a long list of innovations born in this country. Today, Sweden ranks as one of the most innovative countries in the world. Heavy investments in research, encouragement of critical thinking and entrepreneurship from an early age and openness to international influences are some of the key

factors behind this development. Swedish society is traditionally non-hierarchical and has a strong belief in the individual. Through flat organisations and collective decision-making, everyone is given the opportunity to speak and come up with ideas. This increases the probability of new inventions.

Education is also closely linked to innovation capacity. In Sweden, education is free and universities have a close collaboration with both the public and private sectors, setting the foundation for global Swedish companies.

Innovation is at the core of several of our activities in India and can be found both within our larger companies as well as forming the core of new small companies entering the Indian market. It is also a cross-cutting feature of our work as Team Sweden.

# Sustainability

Sweden has a long history of international commitment in pursuing global cooperation in sustainable development. This has led to Sweden being in the forefront of developing new environmental technologies and sustainable system solutions. This includes renewable energy, green buildings, waste management, air and water treatment, sustainable fuels and battery-driven vehicles.

As the first country in the world to pass an environmental protection act, Sweden also hosted the first UN conference on the global environment in 1972. Since then, Sweden has managed to grow its economy substantially while reducing carbon emissions and limiting pollution. The Swedish green model means integrating business and sustainability. Sweden has emphasized that green growth can drive transition through technical innovation.

Sweden has invested heavily in the search for alternative energy sources. More than half of Sweden's national energy supply comes from renewable sources and Sweden aims at further reducing greenhouse gas emissions. Waste management, acid rain prevention, sustainable urban planning and recycling are other environmental areas in which Sweden has made progressive headway and challenged the status quo.

We bring sustainability into our work also here in India, with areas such as climate, renewable energy and urban transport very much in our focus. Increasingly we will also see resource management at both the society level with waste-to-energy solutions and the individual's responsibility for the next generation's living conditions.

**Ecophon**<sup>®</sup>  
SAINT-GOBAIN  
A SOUND EFFECT ON PEOPLE

## Saint-Gobain Ecophon AB - Managing the indoor Sound Environment in India

To help enhance the user well-being and performance, what do you think you need to consider when designing any indoor space?

Well, the first thing is that people will most likely perform a vast variety of activities, and this demands a specific attention to the acoustic quality!

There will at any given time be people talking on the phone, working in teams, having meetings, doing tasks in front of the computer or machines, that demand concentration or having brainstorming sessions. All these activities require their own acoustic solution. We call this 'Activity Based Acoustic Design'. Our solutions support the activity taking place and thus enhance people's job satisfaction, job performance and overall wellbeing.

Quick Facts - A good acoustical environment can:

- Reduce adrenaline levels by 30%
- Improve task motivation by 66%

### About Ecophon Group:

Ecophon Group develops, manufactures and markets acoustic products and systems for ceilings and walls. Used all over the world, our solutions meet the growing demand for good acoustics with the focus on offices, education, and health care premises. Ecophon contributes to a better working environment— wherever people work and communicate. The company is based in Hyllinge in Sweden, and it's a part of the global Saint-Gobain Group

- Increase performance during tasks that require concentration by up to 50%

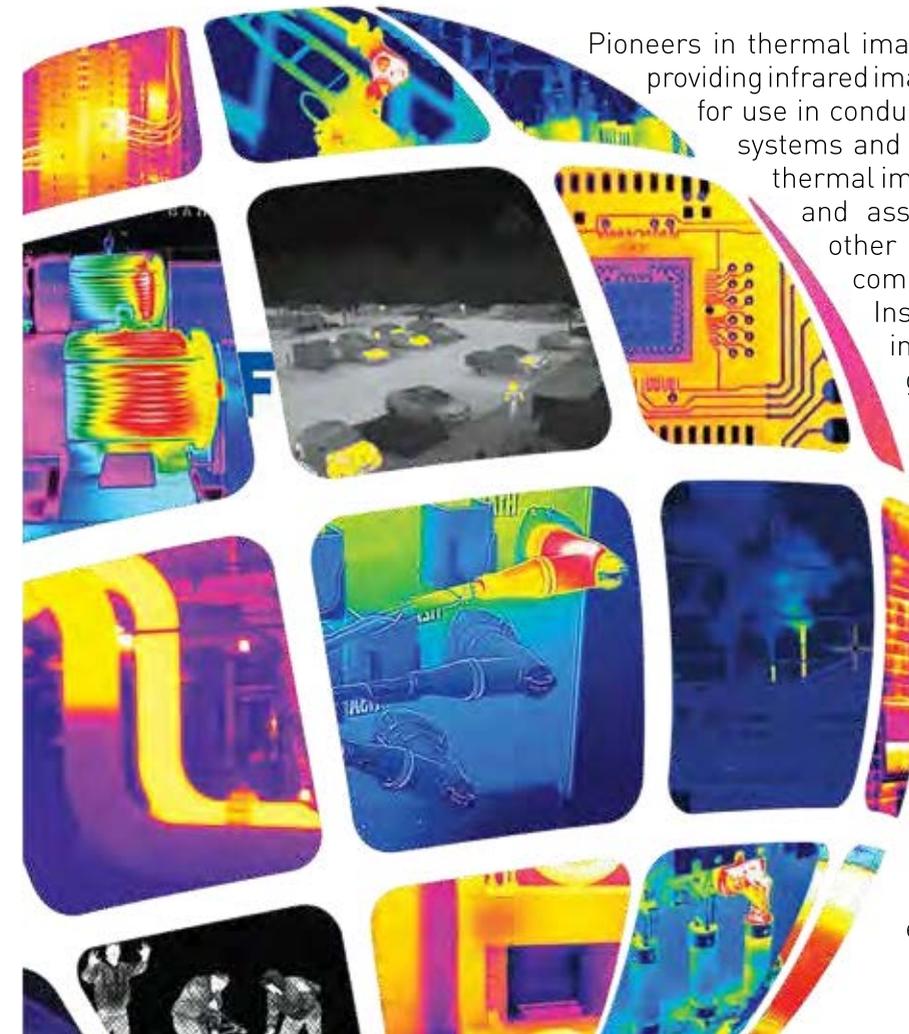

- Improve mental arithmetic performance by 20%

At Ecophon, our approach is to take the human perception into account and to work with most relevant acoustic parameters, which can help us create a comfortable acoustic environment. An interior environment with controlled sound levels and reduced disturbances, improves the company's popularity as a workplace. This in turn, can help them attract and retain a talented workforce in the long run!

If you have a built space with an acoustics challenge, or are planning a new project and would like to avoid sound quality related issues, please contact – Concept Development manager (India) – Manit Ramaiya at [manit.ramaiya@saint-gobain.com](mailto:manit.ramaiya@saint-gobain.com) or write back to us on [EcophonIndia@saint-gobain.com](mailto:EcophonIndia@saint-gobain.com)

**FLIR**<sup>®</sup>  
The World's Sixth Sense<sup>®</sup>

Pioneers in thermal imaging, FLIR was founded in 1978, originally providing infrared imaging systems that were installed on vehicles for use in conducting energy audits. Today FLIR's advanced systems and components are used for a wide variety of thermal imaging applications including measurement, and assessment of thermal energy, gases, and other environmental elements for industrial, commercial, and scientific applications. The Instruments segment provides devices that image, measure, and assess thermal energy, gases, and other environmental elements for industrial, commercial, and scientific applications under the FLIR and Extech brands.

FLIR's products improve the way people interact with the world around them, enhance public safety and well-being, increase energy efficiency, and enable healthy and entertained communities.

At FLIR we provide superpower vision, helping people around the world save lives, protect the environment, and enhance productivity. We're building more than innovative technologies; we're striving to build a more sustainable, more efficient, safer future.

Jan-Olof Yxell/imagebank.sweden.se

PLATFORMS

Ola Ericson/imagebank.sweden.se

# Smart Cities

Environmental awareness is deeply rooted in the Swedish society today. Sweden and Swedish companies are known for their sustainable approach – not the least when it comes to urban development.

During the State visit by the Indian President Mukherjee to Sweden in June 2015, a Memorandum of Understanding (MoU) within the field of sustainable urban development was signed. The MoU aims to “promote bilateral cooperation between the Participants in the field of sustainable urban development”, and create a foundation to further develop the cooperation between the two countries.

The Sweden India Smart Cities Platform promotes smart urban solutions from Sweden for the Indian market within the fields of transportation, connectivity, waste management, energy and safety and security. There is a great match between

Swedish solutions and Indian cities’ needs, but it is also clear that one size does not fit all. The platform companies’ products and services have therefore been customised for the Indian market and are scalable for small and large city solutions.

Under the platform the following activities, amongst others, are conducted:

- Workshops with key Indian stakeholders and Swedish technology providers
- Company matchmaking and facilitation of G2G, B2G and B2B cooperation
- Project development and facilitation of feasibility studies
- Dialogue with Swedish export financiers
- Promotion and networking at events and exhibitions
- Delegation visits to Sweden

Werner Nystrand/Foto/imagebank.sweden.se

Melker Dahlstrand/imagebank.sweden.se

# Energy

The India-Sweden Innovations' Accelerator (ISIA) program is part of the intergovernmental cooperation between India and Sweden in the area of new and renewable energy technologies.

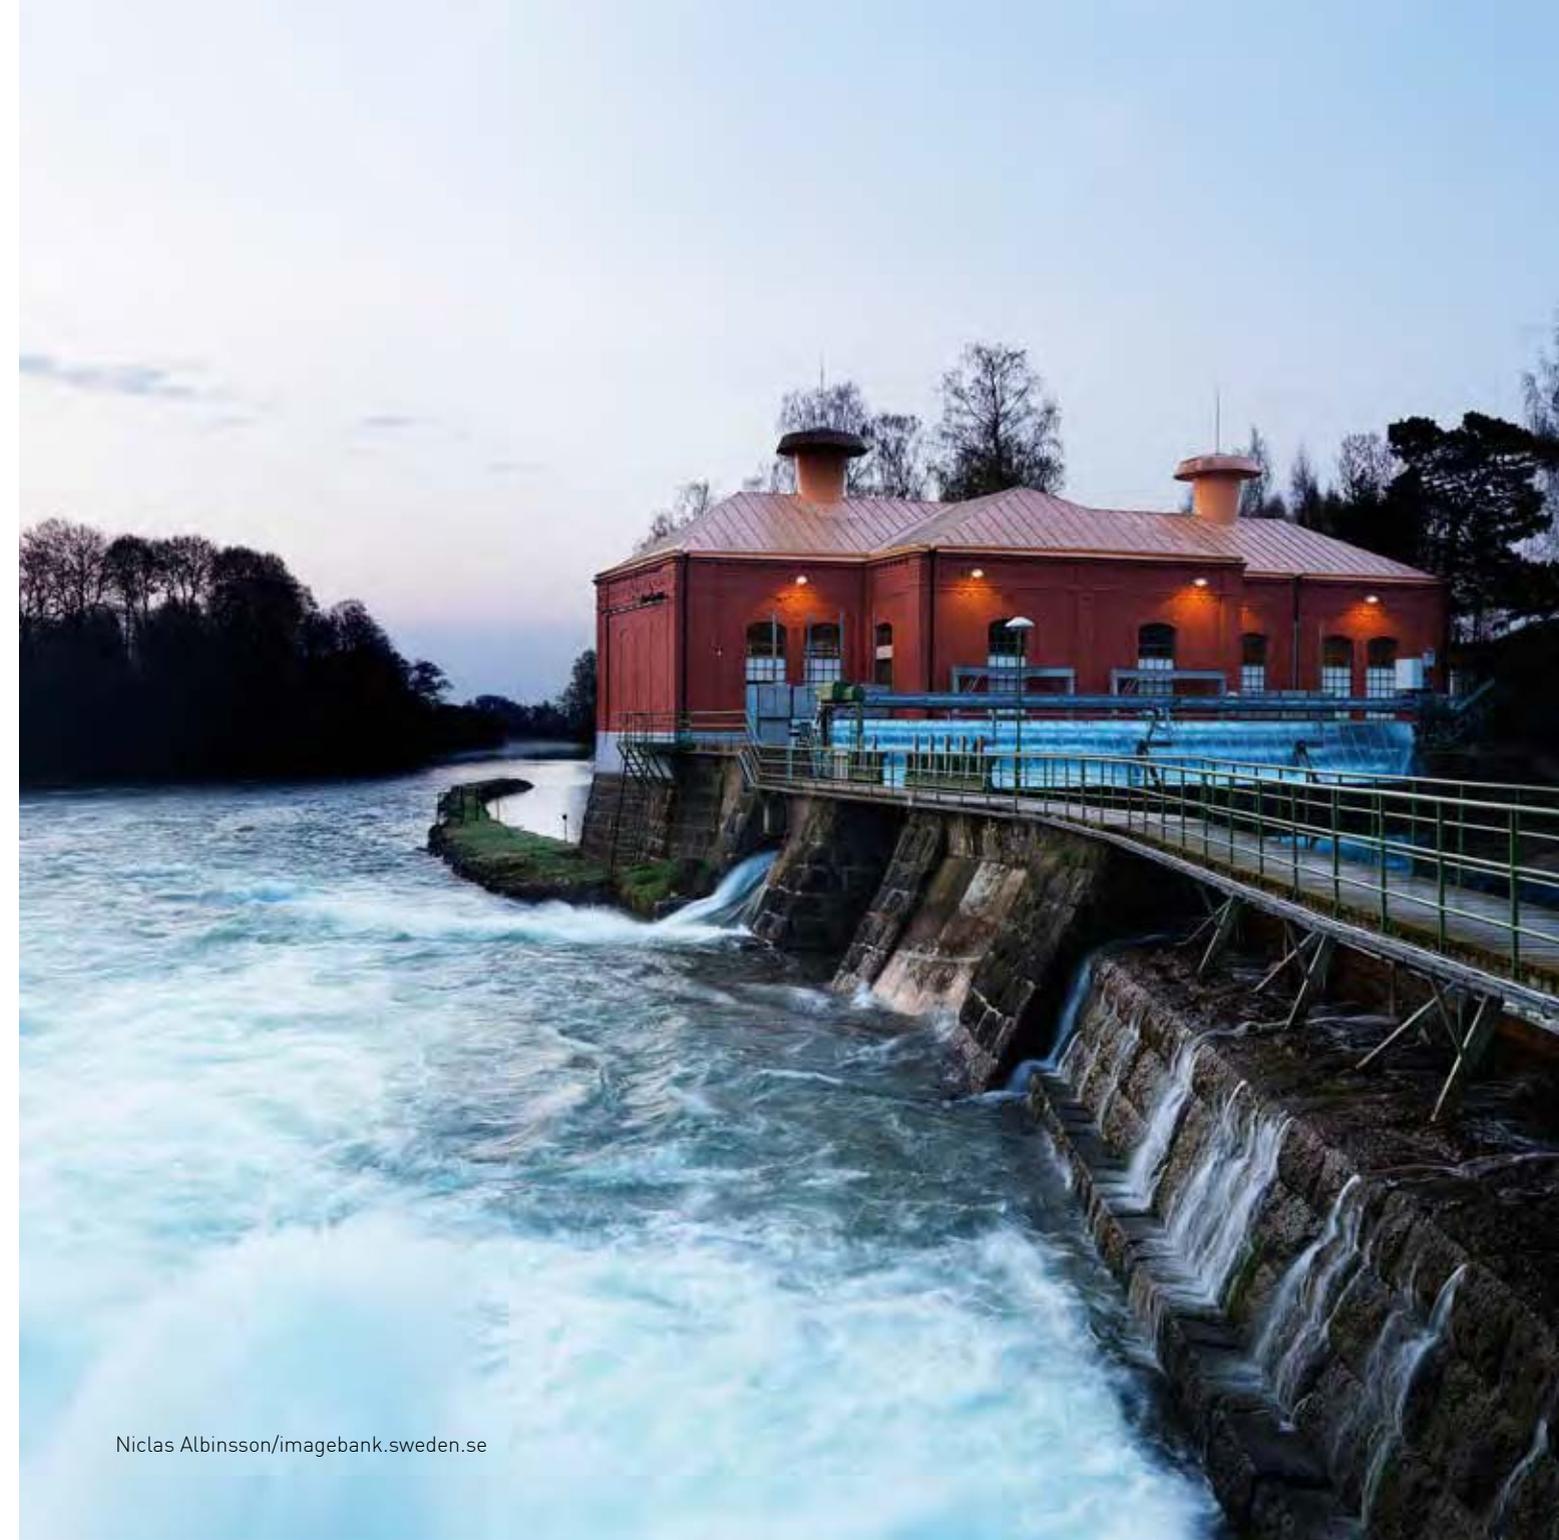

The objective of the program is to develop and provide platforms for joint innovation, research, development and deployment, which answer to shared needs and are of mutual benefit.

ISIA is based on cooperation between Business Sweden and the Swedish Energy Agency with the Confederation of Indian Industries (CII) as the main Indian partner. The program focuses on preparing and implementing customised market entry plans for the participating Swedish SMEs from various segments of clean energy and energy efficiency.

The program runs in two year cycles, with 5-6 companies joining the platform on a bi-annual basis. Till date, the program has resulted in successful introduction of over 30 SMEs including Cleanmotion, FOV Biogas, Regin AB, Metrum AB, World Thermal Services and PPAM Solkraft.

Under the platform the following activities, amongst others, are conducted:

- Customised delegations to India
- Development of market entry plan for Swedish companies under the Steps to Export Program
- Workshops followed by matchmaking with Indian public and private stakeholders
- Qualified B2B meetings with potential customers, partners, distributors, etc.

# Healthcare

Sweden and India signed a Memorandum of Understanding (MoU) in 2009 to facilitate healthcare focused collaboration. This MoU is known to be one of the most active and effective international MoUs that India has today. The past five years have seen several projects and collaborations as a result of this MoU, especially in the focus areas of infection control, lifestyle diseases, elderly care, tertiary care and maternal and child care.

The overall objective of the Swedish Lifesciences and Healthcare Platform in India is to facilitate dialogue and exchange of ideas within the Swedish model of healthcare and best practices in India. The platform serves as a key interface between the various public and private stakeholders in

the Swedish and Indian healthcare system. The structure of the platform is built on an active interplay between government, academia and private enterprise and it has been active since 2014 through the following activities:

- Workshops with key healthcare experts within the Indian Government (Central and State) and Swedish technology providers
- Skill training and capacity building programs for nurses and health practitioners across India
- Providing insights and updates of the healthcare scenario developments to Swedish companies
- Delegation visits to Sweden

# Education

Since 2011 Team Sweden in India, along with the Swedish Institute and Swedish universities, has been strategically promoting Sweden as a higher education destination.

This has been done through the following initiatives:

## **Pull To Go/Pre Departure Seminars**

Pre-departure events across India for candidates admitted to Master studies in Sweden which also provides an opportunity for Swedish companies to connect early with future employees with Indo-Swedish skills and experiences.

## **Sweden Education Days**

Recruitment events across India with universities during the autumn, which also promotes Swedish companies as future employers.

## **Job and Internship Platform**

A web-based platform to link Indian students with an education from Sweden to Swedish-Indian companies.

For more information log on to the below links:

# Gender

Gender equality is one of the cornerstones of Swedish society. The aim of Sweden's gender equality policies is to ensure that everyone enjoys the same opportunities, rights and obligations in all areas of life. These values are promoted in our work in India as well.

Eight out of ten Swedish companies in India work actively with gender related questions, but so far only 20% of the employees are women. We still have a long journey ahead. The approach is based on the knowledge that business leaders can improve the equality in their companies, if they walk the talk.

Swedish companies work with strategic recruitment, active mentorship and leadership development to increase the number of women in

their workforce, especially in leadership positions. Policies to give equal opportunities and rights as well as ensuring equality of choice, such as replacing the gender-specific maternity leave with parental leave, are being implemented.

Gender justice refers to a world where everyone is treated equally, and is able to share equitably in the distribution of power, knowledge and resources. We want to see all people free from cultural and interpersonal systems of privilege and oppression, and from violence and repression based on gender.

This requires that we all enlarge our perspectives, challenge our bias, systems and structures to fully appreciate and embrace true partnership.

Sofia Sabel/imagebank.sweden.se

Simon Paulin/imagebank.sweden.se

Sofia Sabel/imagebank.sweden.se

# Skills

India's growth is impressive. It is a young nation with nearly 12,000,000 people entering the labour market annually. This is a great possibility, but also a challenge. Equipping men and women with skills that lead to employment is important.

Swedish companies in India build skills throughout value chains. Seven out of ten companies equip people within the area of their business operations, at suppliers or customers, or in community development programs. This has been part of our commitment to India for a long time.

We believe a key contribution we can make is to enable women to enter the organised job sector. Research shows that less than a quarter of the

total workforce in the formal economy is made up by women. If women participated on similar terms as men, India would increase its GDP with 60% (2.9 trillion USD) 2025.

India's future is also in entrepreneurs, alternative occupations and in micro-grids of local economies. Women's ability and capacity in this sphere will, when released, create synergistic effects on value chains, communities and society.

We are strong proponents of public-private partnerships. We believe in combining forces to build sustainable eco-systems. It is about us working together for our future.

Sofia Sabel/imagebank.sweden.se

## DeLaval – We Live Milk

India is one of the largest producer of milk in the world. However most of its milk is produced by small farmer families in remote villages. While men in these families have been concentrating on agriculture the dairy farming has been mainly focused upon by female member of the family. One of the toughest task in dairy farming has been hand milking, this also had a lot of pain and frustration for female farmers in the society.

DeLaval has worked extensively with female farmers to support and improve on this social fabric and have introduced mechanisation for milking thus providing them relief and comfort from the pain of hand milking. DeLaval, initiated awareness and

education process through demonstration of these units from village to village and by communicating its advantage for female farmers and milk productivity. After seeing these demonstration the farmers used to get convinced about its benefit for the family and have adopted mechanisation much faster than earlier. These rural campaigns have provided female farmers the comfort and better social standing compared to earlier situation with hand milking.

With thrust of producing clean & untouched milk to improve milk quality and to address increasing demand for commercial dairy farming, DeLaval in India works closely with farmers to provide education and training on practices and protocols for modern ways of dairy farming. DeLaval conducts courses at different locations to educate farmers on improving productivity and milk quality while addressing cow comfort and cow hygiene.

## India Sweden Business Leaders' Roundtable - ISBLRT

ISBLRT is a high-level platform for business leaders from Sweden and India. The platform was welcomed by the Prime Ministers in the Joint Statement from their meeting in Mumbai in February 2015. The aim is to identify joint challenges in the fields of research, innovation, investments, financing, trade, business, industrialisation and regulatory issues which need to be addressed and to forge a strong and durable relationship between the two countries. This forum of business leaders would be able to identify collaborations, draw upon best practices and also advise political leadership on both sides, on the way forward in order to develop our bilateral relations.

ISBLRT-members are mainly CEOs and Chairpersons of multinational companies from both countries. Heads of reputed academic institutions can be invited separately to be members of ISBLRT. ISBLRT is divided in four working groups: Smart City, Digitisation, Defence and Skill India.

Co-chairs are Mr Marcus Wallenberg from Sweden and Mr Baba Kalyani from India. ISBLRT secretariats are Sweden-India Business Council and Confederation of Indian Industries. In India, the Department of Industrial Policy and Promotion, DIPP, is the governing body. ISBLRTs set-up ensures direct communication to the political and business leadership on both sides.

## Team Sweden India

Team Sweden India has also been established in Stockholm as one of three highly prioritized market groups. The group will focus on cooperation and coordination between public and private sector actors active in India in order to create conditions and synergies favourable to the promotion of trade and investment flows between Sweden and India.

State Secretary for Trade, Oskar Stenström, is chair and key members include the Ministry for Foreign Affairs, Business Sweden, Sweden India Business Council, The Swedish Energy Agency, The Association of Swedish Engineering Industries and many more.
